Enterprise

NebulaDisk

by NitroButton

ON-PREMISE VERSION

NebulaDisk has been designed and implemented as a distributed system that is **easy to install and maintain** on-premise.

Facilitate **compliance** and meeting regulatory requirements.
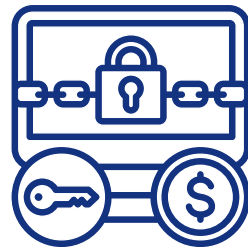

FULLY CUSTOMIZABLE

Features

ENCRYPTION END-TO-END

Our technology allows you to configure end-to-end encryption using **highly secure standards such as AES-256**.

Also, you can bring your own end-to-end encryption by using already available solutions, for example Bitlocker (Windows) or LUKS (Linux)

The NebulaDisk platform can provide resistance to ransomware by enabling point-in-time recovery.

The data volumes can be configured to be **reconstructed exactly as they were** at a specific date and time.

RANSOMWARE RESISTANCE

CUSTOMIZABLE FEATURES

Instead of offering a one-size-fits-all product, we adapt our product to seamlessly integrate with your existing technology stack, **optimizing performance and functionality**.
